📁 [Portfolio](#)

Summary

- Software Engineer and Data Professional with experience at Uber, specializing in building scalable data infrastructure and automation systems using SQL, Python, Tableau, Excel and GCP to drive data-driven decision making.
- Delivered measurable impact by improving reporting accuracy by 98% and increasing process efficiency by 20% through optimized ETL pipelines and real-time dashboards.

Education

Lakehead University

Sep. 2024 – April 2026

Master of Science in Computer Science — CGPA - 93.28%

Thunder Bay, Canada

M.Sc. Research – Adaptive Continuous Multimodal Facial Authentication

Sept 2025 – April 2026

and Deepfake Detection (*Submitted to ACM Transactions on AI Security and Privacy*)

- Built a Two-Stream Fusion 3D-CNN + MAML-based few-shot learning framework leveraging PyTorch, Dense Optical Flow, and Dlib, achieving state-of-the-art deepfake detection accuracy of 100% (GRID), 98.11% (FaceForensics++), and 96.63% (MOBIO).
- Developed a real-time full-stack biometric authentication system using FastAPI, React.js, and WebRTC, enabling continuous verification via 3-second sliding windows and reducing user re-authentication latency to < 5% seconds.

Teaching Assistant – Cloud Computing for AI and ML

Jul 2025 – Aug 2025

- Facilitated course delivery and evaluation by applying concepts from AWS/GCP, distributed systems, and Python-based workflows while mentoring 50+ students to improve understanding of model deployment, debugging, and scalable architectures.

Experience

Nineleaps Technology Solutions

Feb 2023 – Aug 2024

Data Engineer & Analyst (*UBER External Consultant*)

Bangalore, India

- Architected and maintained 10+ automated ETL pipelines and dashboards using Python, MySQL, and GCP, achieving > 98% real-time data accuracy for global business reporting workflows.
- Engineered high-performance backend queries and data processing workflows to handle and update 100K+ daily records, ensuring system reliability and low-latency data availability.
- Collaborated with cross-functional stakeholders on 5 high-priority projects, translating complex datasets into actionable metrics that drove a 20% increase in process efficiency.

Knowledge Solutions India

Jun 2021 – Aug 2021

ML Intern

Bangalore, India

- Designed a K-Means Clustering model to analyze performance data from 1,000+ colleges, achieving 87% accuracy in predicting graduation trends.
- Built and deployed a heart disease prediction model using Logistic Regression, classifying health risks across diverse datasets with 89% classification accuracy.

Technical Skills

Languages: Python, SQL, C, HTML, CSS, React.js

Data, AI & Machine Learning: PyTorch, XGBoost, 3D-CNNs, MAML, Dense Optical Flow, Optuna, Dlib

Cloud, Databases & Tools: Google Cloud Platform (GCP), AWS, MySQL, Tableau, Looker Studio, Git, Linux

Projects

Uber GSS Ads-Ops & Rider Analytics | *Python, MySQL, Tableau, JIRA, QueryBuilder, uWsgi* Jul 2023 – Aug 2024

- Engineered complex SQL queries and end-to-end data pipeline automations to process millions of rows of global revenue data, architecting high-performance backend systems.
- Facilitated continuous system improvements and resolved critical bugs via JIRA, ensuring 100% uptime for business-critical tools and supporting global operational scaling.

Jobtrix — AI-Powered Job Portal | *Python, Flask REST API, MySQL, XGBoost, Requests* Nov 2022 – May 2023

- Engineered a full-stack job recommendation platform with a Flask REST API backend, integrating a custom XGBoost machine learning model to match users with highly relevant roles based on skillset analysis.
- Architected an automated data ingestion pipeline using Python Requests to continuously scrape, clean, and load live job postings into a MySQL database, ensuring real-time dataset accuracy and system reliability.
